

Hardware Development Project Based on STM32 Microcontroller

Course Code: CSE 3200

Student		Supervisor
		Dr. Md. Nazrul Islam Mondal Professor Department of Computer Science & Engineering RUET
Roll	Name	
2103064	Md. Asad-Al-Adil	

Project Proposal:

“Handwritten Digit Detection using STM32F103C8 Micro-controller Unit and 7 Segment Display Through UART Communication with Computer Hardware & Software”

Objectives:

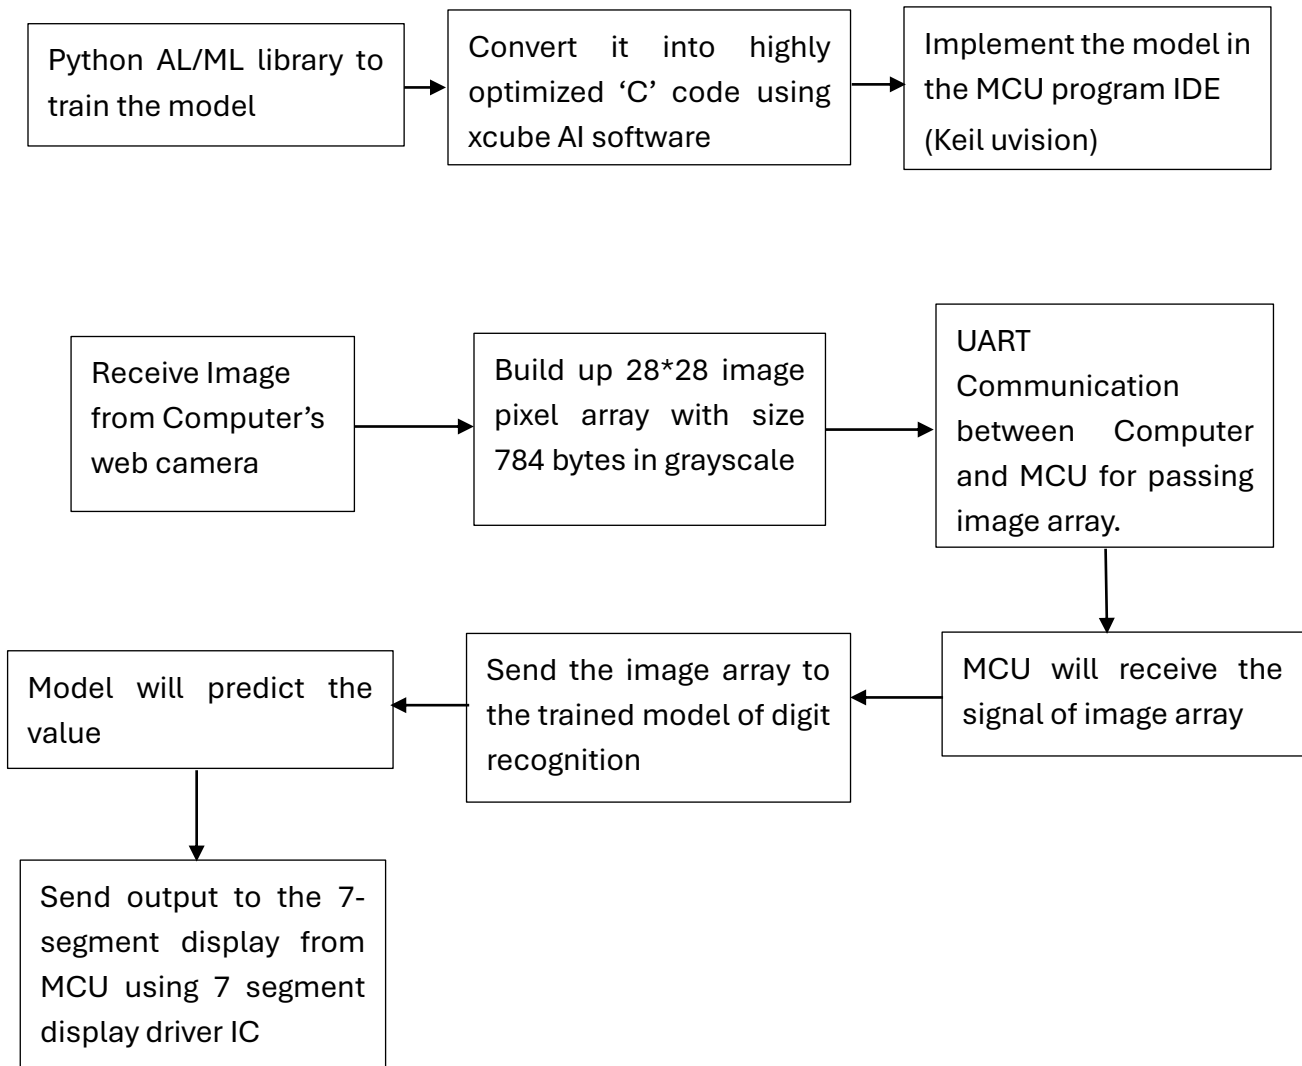

- To create human machine interaction.
- To learn how to transmit the signal or value using UART peripherals.
- To drive the hardware component.
- To enrich knowledge in Artificial Intelligence and Machine Learning.
- To become advance with functionality of the programs.

Features:

- Handwritten digit recognition.
- Image captured through Computer’s web came.
- UART Communication.
- Real time analysis and display output.

Procedure:

(Model Train + inside working functionality)

Challenges:

- 20 KB RAM
- 64 KB Flash Memory
- Equipment
